TIPS for Water Boil Advisories

- Drink bottled water. Drink water that didn't come from the tap such as water from a bottled water cooler or single-use bottled water. You can contact your local Culligan Dealer for bottled water delivery service to get access to three- or five-gallon jugs of water.
- Boil water. This is the best method for sterilizing water. Boil water for one minute, let it cool and store it in clean, covered containers. Boiling water will kill any disease-causing organisms and provide clean, potable water.
- Sterilize with bleach. If you are not able to boil water, unscented liquid household chlorine bleach is an alternative. Add 1/8 teaspoon (or eight drops) for each gallon of water. Mix and let stand for 30 minutes before use.

**Following a Boil Water Advisory, consumers with water treatment equipment should contact a Vetter's Culligan Man to sanitize water softeners and drinking water systems. The local Culligan Man can also answer questions about the availability of bottled water services.

“Culligan strives to ensure communities are aware of the measures to take during Boil Water Advisories, The local Culligan Man is a COMMUNITY water expert and often has the expertise and products to help consumers obtain safe drinking water in the event of a boil alert or other water emergencies.”
